### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a) because they fail to show the required details as described in the specification.

Re FIG. 4:

- The transmitter and receiver clocks are not shown relative to the transmitted and received data.
- The plurality of data packets (more than one) and the individual data bit-values within each of the data packets are not shown.
- The individual waveforms are not labeled.
- The first synchronous period is not shown.

Re FIG. 6:

- The transmitter and receiver clocks are not shown relative to the transmitted and received data.
- The plurality of data packets (more than one) and the individual data bit-values within each of the data packets are not shown.
- The individual waveforms are not labeled.
- The first synchronous period is not shown.
- The numbering of the sample shift does not match the disclosed procedure for overflow.

Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to

avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Objection to the Specification***

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors. For example:

Re claim 7:

- The phrase “transmitter and receiver to transmit data” (line 7) is indefinite, as it does not specify whether the receiver receives data.
- The phrase “front edge of each of the data” (lines 10 and 11) is indefinite, as it does not specify how the front edge of the data is determined.
- The phrase “using the leading edge sampling phase of each of the received packages having the most frequency in the first synchronous period as an initial leading edge phase;” (lines 13 and 14) is indefinite as it does not specify what most frequency and first synchronous period are.

Re claim 13:

- The phrase “transmitter and receiver to transmit data” (line 7) is indefinite, as it does not specify whether the receiver receives data.
- The phrase “front edge of each of the data” (lines 10 and 11) is indefinite, as it does not specify how the front edge of the data is determined.
- The phrase “using the leading edge sampling phase of each of the received packages having the most frequency in the first synchronous

Art Unit: 2116

period as an initial leading edge phase;" (lines 13 and 14) is indefinite as it does not specify what most frequency and first synchronous period are.

The remaining claims are similarly indefinite.

The claims are so indefinite as to preclude a reasonable search of the prior art by the examiner. Accordingly, the claims have not been examined on the merits.

The prior art made of record and not relied upon may be relevant to applicant's disclosure: Patent No.: 6,477,181 B1 and 6,631,429 B2.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stefan Stoykov whose telephone number is (571) 272-4236. The examiner can normally be reached on 8:00AM-4:30PM.
